## PROJECTS

**1.School Management System:** As the name suggests, the website is about school management, it provides information about the school. In addition to this, there is login features where student, teacher and admin can sign in with their credentials. Admin has the authority to change things.

Technologies used: Bootstrap, jQuery, Js, php, mySql

[Github](#) [Deployment](#)

**2.Pokemon website using React:** The web app gets the information from an open API provided by <https://pokeapi.co> and shows them n pokemons per page. If a character is clicked, the details about that character is shown.

[Github](#) [Deployment](#)

**3.URL shortner using nodejs and mongodb:** The web app allows users to post their url. When posted valid url, it returns a number as shorturl in the json format. <this\_project\_url>/api/shorturl/<number> is how a user can get redirected to his/her url. Mongodb is used as database to store the url and their corresponding shorturl number.
