PROJECTS

1.Paginated Pokemon List using React: The web app gets the information from an open API provided by https://pokeapi.co and shows them 20 pokemons per page. If a character is clicked, the details about that character is shown.

Github   Deployment

2.URL shortner using nodejs and mongodb: The web app allows users to post their url. When posted valid url, it returns a number as shorturl in the json format. <this_project_url>/api/shorturl/<number> is how a user can get redirected to his/her url. Mongodb is used as database to store the url and their correspounding shorturl number.

Github   Deployment
